

A woman with blonde hair is lying on her back on a dark surface, possibly a floor. She is wearing a blue jacket over a light green top. Her eyes are closed, and she appears to be unconscious. In the background, several people are walking, their figures are blurred, and there are bright, out-of-focus lights, suggesting an indoor public space like a mall or airport.

Philips HS1 defibrillator

SIDE BY SIDE - STEP BY STEP

Designed for the ordinary person in the extraordinary moment

The Philips HS1 defibrillator acts as your personal coach to guide you through the process of treating a victim of suspected sudden cardiac arrest.

The HS1 provides real-time guidance through simple, step-by-step voice commands and CPR coaching.

The Philips HS1 guides the responder with clear and adaptive voice instructions. The intelligent sensors detect at what step the responder is and adapt seamlessly to the responder's level of expertise, empowering even the most inexperienced responders during a rescue.

Its unparalleled ease-of-use sets the Philips HS1 apart: it is the only FDA Over-The-Counter approved AED in the world.

SAVE TIME - SAVE LIVES

Fast shocks to improve treatment success

The European Resuscitation Council recommends never to interrupt CPR for more than 10 seconds (ERC Official 2015 Resuscitation Guidelines). With a time-to-shock of only 8 seconds, the Philips HS1 is among the fastest at delivering shock treatment after CPR periods.

SIMPLE AND RELIABLE

Ready to use when you need it

The HS1 is a simple and reliable low-maintenance defibrillator.

It performs more than 85 self-tests monthly, weekly and daily (including the proper functioning of the electrode pads). If one of the self tests fails, the device will start chirping loudly to warn that it is no longer ready-for-use. After pressing the flashing blue button, the device will tell you what action is needed.

Its extensive self-test routines and loud warnings make sure you can trust that the Philips HS1 is always ready-to-go if needed.

PERSONALISED THERAPY

For improved results for each patient

Before you can deliver a shock, the HS1 automatically checks to make sure a shock is necessary and that the right, personalised therapy is given.

If you install the infant/child SMART Pads Cartridge, the defibrillator will automatically adjust to a lower energy level and modify the coaching instructions to help you provide infant/child CPR periods.

PHILIPS LEADING THE AED INDUSTRY

Innovation is Philips' trade mark - more than 2 million AEDs sold worldwide

I am proud of the long and successful history of our automated external defibrillators - also known as AEDs - which have helped save lives every day for the past two decades. Today, July 3rd, 2019, we reached the incredible milestone of having shipped a total of two million AEDs worldwide, and we will continue to innovate and provide our customers with reliable easy-to-use life-saving technology
